# G DATA
# **Managed Endpoint** Security powered by Microsoft Azure

## The modern Managed Security Solution – highly flexible and always available

Together with our partners, we offer Managed Endpoint Security, which combines the excellent protection of G DATA security solutions with the comfort of a managed service. Installation and configuration of the Management Server, which is used to deploy and update endpoints, are carried out by the G DATA partner, either in their own data center or on-premises with the end customer.

To simplify the deployment, management and scalability of the required infrastructure, we have developed Managed Endpoint Security Powered by Microsoft Azure and closely worked together with Microsoft to optimize it for the new German cloud.

This solution enables partners to manage a virtual Management Server in the German Microsoft Cloud. Thanks to compliance with Germany's strong data protection laws, the platform meets the public cloud solution compliance requirements of many German SMBs.

This allows G DATA partners to flexibly scale the solution without delays and to guarantee their customers high availability.
